

## LISTING OF THE CLAIMS

1. (Previously Presented) A process of growing a thin film of  $\text{Al}_2\text{O}_3$  on a substrate in a reaction chamber by a sequential vapor deposition process comprising a plurality of cycles, each cycle comprising:

exposing the substrate in the reaction chamber to gaseous trimethyl aluminum (TMA);

stopping provision of the gaseous TMA;

removing gaseous TMA from the reaction chamber;

exposing the substrate in the reaction chamber to atomic oxygen; and

removing atomic oxygen from the reaction chamber,

wherein in each cycle more than one monolayer of  $\text{Al}_2\text{O}_3$  is formed.

2. (Original) The process of claim 1, wherein in each cycle a layer of  $\text{Al}_2\text{O}_3$  3 Å thick is formed.

3. (Previously Presented) The process of Claim 1, wherein the atomic oxygen is generated remotely in a radical generator.

4. (Original) The process of Claim 1, wherein the process is carried out at room temperature.

5. - 20. (Cancelled)
